

On a drizzly day in October 2008 we took a keen group of Year 10 Geographers to the River Darent in Kent. We spent the day investigating river processes and management. We visited two sites, Shoreham and Eynsford, where we took width, depth and velocity readings. The girls also completed some excellent field sketches. As usual we were lucky with the weather – it rained all day in Dulwich but the sun came out in Kent!!
